Profile

Computer Engineering graduate (University of Barcelona, 2026) with professional experience in **C#/.NET and SQL Server backend** development at Win Systems. I build **full stack apps with TypeScript** (NestJS, Next.js, React Native) and **PostgreSQL**, with **automated tests and continuous integration**, and integrate **LLMs** into web apps. I have led the technical coordination of a development team. C1 English and international experience (Erasmus+ in Italy). Available immediately.

Professional experience

Full Stack Software Engineer Intern

09/2025 – 02/2026

Win Systems · Barcelona, Spain

C# · .NET · SQL Server · Dapper · REST · JavaScript · AJAX · MessagePack · Git · Bitbucket

Casino management software (WIGOS, 100,000+ machines). I built ServerHealth, an internal web platform for the QA team that centralises logs and metrics from every server and removes the need for remote desktop access to each machine.

- Designed and built the **C#/.NET REST API** connecting client servers to the central platform, with expiring **token authentication** and automatic renewal.
- Helped **redesign the architecture** to cut traffic between servers: from replicating every log to an **on-demand client-server model** with JSON summaries and MessagePack.
- Built the log viewer (errors, exceptions and warnings, filters and **real-time monitoring**) and a dashboard for CPU, memory, disk, databases and IIS with history in **SQL Server**.
- Separated data access from business logic with DAOs, interfaces and **Dapper**, and implemented **background jobs** that pause monitoring when no users are active.

Projects

Dockly · marina berth booking platform: web, mobile app and SaaS

2026

TypeScript · NestJS · TypeORM · PostgreSQL · PostGIS · Next.js · React Native · Expo · Docker

- Technical coordination of a team of 3** and full stack development: owned bookings, marina search, **multi-tenancy with roles** and the management dashboard, and integrated the team's work.
- Web marketplace (Next.js), mobile app (React Native) and a SaaS for marinas on one **NestJS API** with **hexagonal architecture**.
- Data integrity in **PostgreSQL**: the database prevents overlapping bookings; geographic search with **PostGIS**.
- Almost **900 automated tests** (Jest) and **continuous integration** with GitHub Actions on every change.

MINDSCAPE · multimodal AI, bachelor's thesis

2026

React · FastAPI · Python · Gemini 2.5 Flash · REST · Swagger

- Web app that starts a conversation from an image, with a **React** frontend and a **FastAPI REST API**.
- Integrated **Gemini 2.5 Flash** with a prompt per dialogue stage and **structured JSON output** that controls when the session ends; conversation summaries exported to PDF.

Education

BSc in Computer Engineering · University of Barcelona

09/2021 – 07/2026

Erasmus+ · University of Trento, Italy

02/2026 – 07/2026

Autonomous agents project in JavaScript: BDI agent with A*, LLM-based agent and PDDL planning.

Technical skills

Programming	C#, TypeScript, JavaScript, Python, SQL, Java, C/C++
Backend	.NET, Node.js, NestJS, FastAPI, REST APIs, TypeORM, Dapper, hexagonal architecture
Frontend & mobile	React, Next.js, React Native (Expo), HTML, CSS
Databases	PostgreSQL, PostGIS, SQL Server, MySQL, Firebase
Quality & DevOps	automated testing (Jest), CI with GitHub Actions, Docker, Git, Bitbucket, Swagger
AI	LLMs, Gemini API, multimodal AI, prompt engineering

Languages

Spanish: native · Catalan: native · English: C1 (Cambridge English: Advanced)
